## Investment Objective

The portfolio will aim to deliver levels of out-performance in its asset category

## Investment Policy

To create a return blended from cyclical and secular relative value plus directional opportunities. Assets will be sourced in the South African market, across bonds, money market instruments, cash and interest rate derivatives. Underlying this is an investment process based on macro-economic research to identify these opportunities and monetize them in the most efficient way possible from a risk management perspective.

## Risk Profile

| Low | Low-Medium | Medium | Med High | High |
|-----|------------|--------|----------|------|
|-----|------------|--------|----------|------|

The risk category shown is not guaranteed and may change over time, and may therefore not be a reliable indication of the future risk profile of the portfolio. The lowest category does not mean the investment is risk free. There may be other special areas of risk relating to the investment including liquidity risk, credit risk, market risk, and settlement risk. FundRock Management Company (RF) (Pty) Ltd, ("the manager"), and the investment manager do not render financial advice. Our risk indicator does not imply that the portfolio is suitable for all types of investors. You are advised to consult your financial adviser.

### Market Commentary

Softer-than-expected local consumer inflation data, an unchanged policy rate decision at the SARB's MPC meeting and extended ZAR strength collectively ensured that the nominal yield curve continued to bull flatten during September. There has been an increased demand for emerging market local currency bonds in general in recent months, as global investors look to diversify away from US-based assets. These structural international portfolio shifts help explain why foreign investors remained the largest buyers of SAGBs on the month. That said, nominal bonds (+3.2%) only managed to marginally outperform linkers (3.0%) during September, which implies that some investors believe that compression in breakeven yields since May already captures the SARB's desire to target the lower bound of the country's 3-6% inflation target.

**Please note:** The above commentary is based on reasonable assumptions and is not guaranteed to occur.

### Portfolio Asset Allocation Report

### Portfolio Valuation & Transaction Cut-Off

Portfolios are valued monthly. The cut off time for processing investment subscription is 10:00am on the last business day of the month prior to enable processing for investment on the first business day of the next month. Redemptions are subject to one calendar months' notice.

### Total Expense Ratio & Transaction Costs

A Higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER.

### Performance

The investment performance is for illustrative purposes only and is calculated by taking actual initial fees and all ingoing fees into account for the amount shown; and income is reinvested on the reinvestment date. The performance figures given show the yield on a NAV basis. The yield figure is not a forecast. Performance is not guaranteed and investors should not accept it as representing expected future performance. Individual investor performance may differ as a result of initial fees, time of entry/actual investment date, date of reinvestment, and dividends withholding tax. The annualized total return is the average return earned by an investment each year over a given time period. Actual annual figures are available from the manager on request. The highest and lowest 12 months return represent the highest and lowest actual returns achieved during any 12-month rolling period since the original launch date of the fund. Investors are advised that the annualized performance figures include returns earned during the relevant periods prior to the fund being regulated under CISCA.

### Fund Risk

|                                                 |                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Leverage Risk:</b>                           | The Fund borrows additional funds, trades on margin or performs short sale trades to amplify investment decisions. This means that the volatility of a hedge fund portfolio can be many times that of the underlying investments due to leverage on a fund.                                                                                                                                           |
| <b>Derivative Risk:</b>                         | A Derivative positions are financial instruments that derive their value from an underlying asset. Derivatives are exposed to implicit leverage which could result in magnified gains and/or losses on the portfolio.                                                                                                                                                                                 |
| <b>Counterparty Credit Risk:</b>                | Counterparty risk is a type of credit risk and is the risk of default by the counterparty associated with trading derivative contracts. An example of counterparty credit risk is margin or collateral held with a prime broker                                                                                                                                                                       |
| <b>Volatility Risk:</b>                         | Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at risk (VaR) which is a statistical technique used to measure and quantify the level of volatility. |
| <b>Concentration and Maturity Segment Risk:</b> | A large proportion of total assets invested in specific assets and/or maturity segments on the yield curve. Concentrated positions in a portfolio will material impact the returns of the portfolio more so than diversified portfolios.                                                                                                                                                              |
| <b>Correlation Risk:</b>                        | A measure that determines how assets move in relation to each other. Correlation risk arises when the correlation between asset-classes change. Correlation risk also arises when the correlation within an asset-class changes. Examples of correlation within asset classes include equity pairs trading, fixed income curve trading and commodities pairs trading.                                 |
| <b>Interest Rate Risk:</b>                      | The values of bonds and other debt securities are inversely proportional to the change in interest rates. Interest rate risk is generally greater for investments with longer maturities as well as when the market does not expect a change in the interest rates.                                                                                                                                   |
| <b>Credit Default Risk:</b>                     | The risk that the government entity or company that issued the bond will run into financial difficulties and won't be able to pay the interest or repay the principal at maturity. Credit risk applies to debt investments such as bonds. The higher the credit rating the less likely the possibility of the issuing company defaulting.                                                             |

### Glossary

|                                         |                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Net Asset Value (NAV):</b>           | Means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.                                                                                                                                          |
| <b>Annualised Return:</b>               | Is the weighted average compound growth rate over the performance period measured.                                                                                                                                                                                                                                                          |
| <b>Highest &amp; Lowest Return:</b>     | The highest and lowest rolling twelve-month performance of the portfolio since inception.                                                                                                                                                                                                                                                   |
| <b>Total Expense Ratio (TER):</b>       | Reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. |
| <b>Transaction Costs (TC):</b>          | Is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns.                                                                                                                 |
| <b>Total Investment Charge (TIC):</b>   | Should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager.                                                                                                                                                |
| <b>Total Investment Charges (TIC%):</b> | = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).                                 |
| <b>Derivative/Financial Instrument:</b> | A contract that derives its value (positive or negative) from another asset                                                                                                                                                                                                                                                                 |
| <b>SAONBOR:</b>                         | South African Interbank Overnight Rate                                                                                                                                                                                                                                                                                                      |

### Mandatory Disclosures

Collective Investment Schemes are generally medium- to long-term investments. The value of participatory interest (units) may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investments are traded at ruling prices and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges, minimum fees and maximum commissions, as well as a detailed description of how performance fees are calculated and applied, is available on request from FundRock Management Company (RF) (Pty) Ltd ("the Manager"). The Manager does not provide any guarantee in respect to the capital or the return of the portfolio. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressure and in such circumstances, a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Commissions and incentives may be paid, and if so, are included in the overall costs. The Manager may close the portfolio to new investors in order to manage it efficiently according to its mandate. Prices are published daily on our website. Additional information, including key investor information documents, minimum disclosure documents, as well as other information relating to the basis on which the manager undertakes to repurchase participatory interests offered to it, and the basis on which selling and repurchase prices will be calculated, is available, free of charge, on request from the Manager. The performance is calculated for the portfolio, as well as that the individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance fees will be calculated and accrued on a daily basis based upon the daily outperformance, in excess of the benchmark, multiplied by the share rate and paid over to the manager monthly. The value of an investment is dependent on numerous factors which may include, but not limited to, share price fluctuations, interests and exchange rates and other economic factors. Where foreign investments are included in the portfolio, performance is further affected by uncertainties such as changes in government policy, political risks, tax risks, settlement risks, foreign exchange risks, and other legal or regulatory developments. The Manager ensures fair treatment of investors by not offering preferential fee or liquidity terms to any investor within the same strategy. The Manager is registered and approved by the Financial Sector Conduct Authority under CISCA. The Manager retains full legal responsibility for the portfolio. FirstRand Bank Limited, is the appointed trustee. The Financial Services Provider ("FSP"), Oakhaven Capital (Pty) Ltd (FSP no 43738), is authorised under the Financial advisory and Intermediary Services Act 37 of 2002 to render investment management services.
