

Investment Objective

The objective of the fund is to generate absolute returns irrespective of market direction and create long-term wealth for investors.

Fund Profile

The portfolio is a multi-strategy hedge fund which allocates to a range of underlying best-in-class Fairtree hedge fund strategies across three asset classes (equity, fixed income and commodities). The portfolio targets a volatility profile between 12-15% which shapes how we blend the portfolio across asset classes. As a result of the volatility signature, the fund is best suited for investors with a long-term time horizon (5 years plus). The portfolio is rebalanced back to its strategic asset allocation (SAA) at least monthly. The Wild Fig strategy has two levels of portfolio management. The Strategic Asset Allocation (SAA) and subsequent aggregate portfolio risk is managed by the Wild Fig Multi Strategy team. Underlying security selection and alpha generation within asset classes and strategies are generated by independent portfolio management teams without a centralized house view.

Risk Profile

Risk Level

Low	Low-Medium	Medium	Medium-High	High
-----	------------	--------	-------------	------

The risk category shown is not guaranteed and may change over time. The lowest category does not mean the investment is risk free. There may be other special areas of risk relating to the investment including liquidity risk, credit risk, market risk, and settlement risk. Fairtree Capital International IC Limited, ("the investment manager"), and the representative office do not render financial advice. Our risk indicator does not imply that the portfolio is suitable for all types of investors. You are advised to consult your financial adviser.

Asset Allocations

Market Commentary

Quarterly Fund Performance

The Fairtree Wild Fig Multi-Strategy USD Segregated Portfolio delivered a positive return during the second quarter, which helped offset the drawdown in Q1 this year.

Monthly Macro

An easing of trade tensions and greater clarity on US fiscal policy set the tone in July, as markets rallied on relief that tariff escalation might be contained and that Congress had passed the One Big Beautiful Bill Act. The S&P 500 rose 2.2%, led by technology stocks and outperformed emerging markets. The rally was also supported by strong US Q2 earnings results & resilient economic data. The US 10-year Treasury yields drifted up 15 basis points to 4.38%.

In the US, the passage of the One Big Beautiful Bill Act on 4 July cemented lower tax rates and expanded spending over the next few years. Trade agreements with several countries, including the UK, Europe, Japan, Vietnam & Indonesia, replaced uncertainty as most deals were struck with a tariff rate of around 15-20%, accompanied by commitments from countries to buy and invest in the US. Despite a modest slowdown in manufacturing (flash PMI at 49.5), services remained resilient. We expect the negative growth and higher inflation impact of tariffs to play out in the economy over the coming months. Some signs are already visible as Core CPI rose to 2.7% y/y, with import goods components seeing accelerated price rises.

Eurozone government bond yields edged higher on positive growth indicators: the flash composite PMI rose to 51.0, while inflation held at 2.0% y/y in June. The European Central Bank maintained its deposit rate on hold but remains wary of downside growth risks.

UK markets contended with stickier inflation, as headline CPI accelerated to 3.6% y/y in June (core at 3.7%), driven by transport, clothing, and leisure costs. Gilt yields climbed to 4.6%, reflecting a relatively tight monetary environment.

Local assets rallied with global markets and were supported by rising PGM prices. The SARB cut its repo rate by 25 basis points to 7.0% and signalled a shift towards targeting 3% inflation. The All-Share index rose 2.3%, while the ALBI bond index gained 2.7%. The rand weakened 2.8% to ZAR 18.22/USD. In response to the 30% reciprocal US tariff threat, government continues to engage with US counterparts towards a deal, but measures to support impacted export businesses and jobs are in the works.

Emerging equities rose 2.0%. China eked out gains (4.8%) on sustained trade talks and positive commodity momentum despite a slight PMI dip to 49.3 and ongoing PPI deflation (-3.6%). India lagged, down 5.2 %, as investors contended with uncertain tariff outcomes, negative foreign inflows and rupee weakness, even as CPI eased to a 77-month low of 2.1%.

Brent crude climbed USD 4.70 to USD 72.70 per barrel. Copper fell 13.4% on tariff concerns, while gold gave back earlier gains. PGMs jumped, as jewellery demand and substitution increased along with auto-catalyst shortages.

Please Note: The above commentary is based on reasonable assumptions and is not guaranteed to occur.

Fund mandate summary

Underlying Capital (Millions)	Month-End	\$ 28.32 m

Portfolio Liquidity (days)	Month-End	0.2	Monthly Average	0.2
Number of Long Positions	Month-End	464	Monthly Average	442
Number of Short Positions	Month-End	355	Monthly Average	335

Fund Risk

Leverage Risk:	The Fund borrows additional funds, trades on margin or performs short sale trades to amplify investment decisions. This means that the volatility of a hedge fund portfolio can be many times that of the underlying investments due to leverage on a fund.
Derivative Risk:	Derivative positions are financial instruments that derive their value from an underlying asset. Derivatives are exposed to implicit leverage which could result in magnified gains and/or losses on the portfolio.
Counterparty Credit Risk:	Counterparty risk is a type of credit risk and is the risk of default by the counterparty associated with trading derivative contracts. An example of counterparty credit risk is margin or collateral held with a prime broker.
Volatility Risk:	Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at risk (VaR) which is a statistical technique used to measure and quantify the level of volatility.
Concentration and Sector Risk:	A large proportion of total assets invested in specific assets, sectors or regions. Concentrated positions or concentrated sectors in a portfolio will material impact the returns of the portfolio more so than diversified portfolios.
Correlation Risk:	A measure that determines how assets move in relation to each other. Correlation risk arises when the correlation between asset-classes change. Correlation risk also arises when the correlation within an asset-class changes. Examples of correlation within asset classes include equity pairs trading, fixed income curve trading and commodities pairs trading.
Equity Risk:	The market price of shares varies depending on supply and demand of the shares. Equity risk is the risk of loss due to the drop in the market price of shares.
Currency/Exchange Rate Risk:	Assets of a fund may be denominated in a currency other than the Base Currency of the fund and changes in the exchange rate between the Base Currency and the currency of the asset may lead to a depreciation of the value of the fund's assets as expressed in the Base Currency.

Glossary

Net Asset Value (NAV):	Means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.
Annualised Return:	Is the weighted average compound growth rate over the performance period measured.
Highest & Lowest Return:	The highest and lowest rolling twelve-month performance of the portfolio since inception.
Total Expense Ratio (TER):	Reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's.
Transaction Costs (TC):	Is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns.
Total Investment Charge (TIC):	Should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager.
Total Investment Charges (TIC%):	= TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).
Leverage/Gearing:	The use of securities, including derivative instruments, short positions or borrowed capital to increase the exposure beyond the capital employed to an investment.
Alpha:	Denoted the outperformance of the fund over the benchmark.
Sharpe Ratio:	The ratio of excess return over the risk-free rate divided by the total volatility of the portfolio.
Sortino Ratio:	The ratio of excess return over the risk-free rate divided by the downside deviation of the portfolio.
Standard Deviation:	The deviation of the return of the portfolio relative to its average.
Drawdown:	The greatest peak to trough loss until a new peak is reached.
Correlation:	A number between -1 and 1 indicating the similarity of the dispersion of returns between the portfolio and another asset or index with 1 being highly correlated, -1 highly negatively correlated and 0 uncorrelated.
Value at Risk (VaR):	Value at risk is the minimum loss percentage that can be expected over a specified time period at a predetermined confidence level.

Portfolio Valuation & Transaction Cut - Off

Portfolios are valued monthly. The cut off time for processing investment subscriptions is 5:00pm (South African time) on the last business day of the prior month. Redemptions are subject to one calendar months notice.

Total Expense Ratio:

A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER.

Mandatory Disclosures

Investment Manager: Fairtree Asset Management (Pty) Ltd, Registration Number: 2004/033269/07 is an authorised Financial Services Provider (FSP25917) under the Financial Advisory and Intermediary Services Act (No.37 of 2002), to act in the capacity as investment manager.

Fairtree Wild Fig Multi Strategy USD Segregated Portfolio is approved by the FSCA under Section 65 of the Collective Investment Scheme Control Act 2002 and has been categorised as a Collective Investment Scheme in Qualified Investor Hedge Fund for public sale in South Africa.

Collective Investment Schemes (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. The investment performance is for illustrative purposes only and the investment performance is calculated by taking the actual initial fees and all ongoing fees into account. Income is reinvested on the investment date. Forward pricing is used.

The Manager retains responsibility for any portfolio marketed on its platform. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.

Past performance is not indicative of future results. Current and future results may be lower or higher than those shown. An investor in the fund may experience a loss. No investor or prospective investor should assume that any information presented in this fact sheet serves as the receipt of, or a substitute for, personalized individual advice from Fairtree Wild Fig Multi Strategy USD Segregated Portfolio or any other investment professional.

The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year.

Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.
