Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

Notes

- 1 A combination of actual fund returns and market index returns have been used to determine the risk indicator as the fund has not been operating for the required five years. Market index returns have been used until March 2022 and fund returns thereafter. The risk indicator may therefore provide a less reliable indicator of the fund's future volatility.
- 2 The bar chart shows fund returns after deducting fees and tax. Tax is deducted at the highest Prescribed Investor Rate of 28%. However, the market index returns are shown before deducting fees and tax.
