Total Expense Ratio & Transaction Costs

The objective of the fund is to earn outsized Rand based returns through recognizing short to medium term opportunities in global financial markets, with an emphasis on the Australian Market.

Portfolio Asset Allocation Report & Exposure Statistics

Exposure Statistics

Gross exposure	0.00%
Net exposure	0.00%

Fund Risk

Leverage Risk:	The Fund borrows additional funds, trades on margin or performs short sale trades to amplify investment decisions. This means that the volatility of a hedge fund portfolio can be many times that of the underlying investments due to leverage on a fund.
Derivative Risk:	Derivative positions are financial instruments that derive their value from an underlying asset. Derivatives are exposed to implicit leverage which could result in magnified gains and/or losses on the portfolio.
Counterparty Credit Risk:	Counterparty risk is a type of credit risk and is the risk of default by the counterparty associated with trading derivative contracts. An example of counterparty credit risk is margin or collateral held with a prime broker.
Volatility Risk:	Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at risk (VaR) which is a statistical technique used to measure and quantify the level of volatility.
Concentration and Sector Risk:	A large proportion of total assets invested in specific assets, sectors or regions. Concentrated positions or concentrated sectors in a portfolio will material impact the returns of the portfolio more so than diversified portfolios.
Correlation Risk:	A measure that determines how assets move in relation to each other. Correlation risk arises when the correlation between asset-classes change. Correlation risk also arises when the correlation within an asset-class changes. Examples of correlation within asset classes include equity pairs trading, fixed income curve trading and commodities pairs trading.
Equity Risk:	Applies to investment in shares or derivatives based on shares. The market price of shares varies depending on supply and demand of the shares. Equity risk is the risk of loss due to the drop in the market price of shares. Equity risk can either be systematic risk which is risk to the entire market based on political and economic indicators or unsystematic risk which is company specific and includes risk relating to company profits, future prospects and general consensus on the company or sector.

## Minimum Disclosure Document - Class 1

## Glossary

Net Asset Value (NAV):	Means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.
Annualised Return:	Is the weighted average compound growth rate over the performance period measured.
Highest & Lowest Return:	The highest and lowest rolling twelve-month performance of the portfolio since inception.
Total Expense Ratio (TER):	Reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's.
Transaction Costs (TC):	Is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns.
Total Investment Charge (TIC):	Should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager.
Total Investment Charges (TIC%):	= TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).
Standard Deviation:	The deviation of the return of the portfolio relative to its average.
Downside Deviation:	Disparity of returns below the average return of the portfolio.
Drawdown:	The greatest peak to trough loss until a new peak is reached.
Sharpe Ratio:	The ratio of excess return over the risk-free rate divided by the total volatility of the portfolio.
Sortino Ratio:	The ratio of excess return over the risk-free rate divided by the downside deviation of the portfolio.
Correlation:	A number between -1 and 1 indicating the similarity of the dispersion of returns between the portfolio and another asset or index with 1 being highly correlated, -1 highly negatively correlated and 0 uncorrelated.
Derivative:	A contract that derives its value ( positive or negative) from the performance of another asset.
MTD:	Month to date return .

## Mandatory Disclosures

Collective Investment Schemes are generally medium to long-term investments. The value of participatory interests (units) may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investments are traded at ruling prices and can engage in scrip lending and borrowing. A schedule of fees, charges, minimum fees, and maximum commissions is available on request from the manager, as well as a detailed description of how performance fees are calculated and applied. The manager does not provide any guarantee in respect to the capital or the return of the portfolio. Excessive withdrawals from the fund may place the fund under liquidity pressure and in such circumstances, a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Commission and incentives may be paid, and if so, are included in the overall costs. The Manager may close the portfolio to new investors in order to manage it efficiently according to its mandate. Prices are published monthly on our website. Where foreign investments are included in the portfolio, performance is further affected by uncertainties such as changes in government policy, political risks, tax risks, settlement risks, foreign exchange risks, and other legal or regulatory developments. Additional information, including key investor information documents, minimum disclosure documents, as well as other information relating to the basis on which the manager undertakes to repurchase participatory interests offered to it, and the basis on which selling and repurchase prices will be calculated, is available, free of charge, on request from the Manager.

The highest and lowest 1-year returns represent the highest and lowest actual returns achieved during a 12-month rolling period year since the original launch date of the portfolio.

Investors should note that the value of an investment is dependent on numerous factors which may include, but not limited to, share price fluctuations, interest and exchange rates and other economic factors. Where funds are invested in offshore assets, performance is further affected by uncertainties such as changes in government policy, taxation, currency risk, and other legal or regulatory developments.
