

TAQUANTA BOND FR FUND

Class R2

Minimum Disclosure Document - 30 April 2025

FUND PROFILE

The Taquanta Bond FR Fund is actively managed and aims to exceed the returns generated by the benchmark over a 3-year rolling period where portfolio position deviation from the benchmark is minimised. The portfolio is not a tracking fund, but will closely replicate the composition of the benchmark and aims to over time generate returns in excess of the benchmark.

FUND OBJECTIVE

The Fund will aim to outperform the JSE/ASSA All Bond Index (ALBI) Index over a rolling 3-year period with a low tracking error.

INVESTMENT STRATEGY

The fund will predominately invest in bonds but can also invest in a diversified range of listed and unlisted instruments, including government bonds, semi-government bonds, corporate bonds, fixed deposits, assets in liquid form, money market instruments and other interest-bearing instruments that offer value on a relative basis. The fund will predominately invest in South African markets but is permitted to include investments in offshore jurisdictions subject to the investment conditions determined by the legislation from time to time. The fund is looking to achieve its investment objective by actively selecting an optimal blend of assets from its investment universe.

ASSET ALLOCATION

Bond exposure is achieved via investments in the derivative market.

INFORMATION & DISCLOSURES

Income Distribution Frequency:	December and June
Income Distribution Cents per Unit (CPU):	June 2024 (2.50), December 2024 (6.39)

FEES

Service Fee (excl. VAT p.a.):	0.25%
Cost Ratios (incl. VAT):	
* Total Expense Ratio(TER%) ² :	0.30%
* Transactions Costs Ratio (TC%):	0.00%
* Total Investment Charges(TIC%) ¹ :	0.30%
* Performance Fee (PF) Included in TER:	0.00%

* TIC reported is up to end December 2024, Which includes the PF component for T4 class. R2 class doesn't have PF applicable.

¹ Total Investment Charges (TIC%) = TER (%) + TC (%). ² The Total Expense Ratio (TER%) of a portfolio, expressed as a percentage of the daily average value of the portfolio, is calculated over a period of usually a financial year and represents a measure of the portfolio's assets that were relinquished to meet portfolio operating costs, including charges, levies and fees. Typical expenses which are deducted from a portfolio include service charges, taxes, trustee fees and audit fees. Unit prices are published daily on the Manager's website. Investor instructions received after 14:00pm shall be processed the following business day.

MARKET COMMENTARY

In April 2025, global macroeconomic sentiment was shaped by moderating inflation in major economies, growing expectations of U.S. Federal Reserve rate cuts, and heightened volatility triggered by the announcement of new Trump-era tariffs on Chinese and Mexican imports.

Volatility returned to U.S. financial markets as tensions between the U.S. and China reignited, sending stocks, the dollar, and oil prices lower. Traditional safe havens like bonds offered little refuge. The International Monetary Fund (IMF) responded by slashing its global growth outlook: 2025 GDP is now forecast to expand by just 2.8%, down from 3.3% in January-its weakest pace since the COVID-driven contraction of 2020. The 2026 outlook was also cut to 3.0%.

In the U.S., inflation softened for a second straight month. March's annual inflation rate eased to 2.4%, down from February's 2.8% and below expectations of 2.6%. Energy costs, particularly gasoline (-9.8%) and fuel oil (-7.6%), fell sharply. Shelter, transportation, and used vehicle prices also decelerated. Food inflation was an exception, ticking up to 3%. Month-on-month, CPI dropped by 0.1%, its first decline since May 2020. Core inflation also cooled, easing to 2.8% annually and just 0.1% monthly, reinforcing bets on a more dovish stance from the US. Federal Reserve.

Global equity markets were choppy: early gains driven by dovish central bank expectations were partially offset by sharp risk-off moves following the tariff news. Bond yields declined on safe-haven demand, and gold surged to record highs amid geopolitical uncertainty and a weaker U.S. dollar. Oil prices fluctuated due to both Middle East tensions and concerns over global trade flows.

While the U.S. economy remained resilient-with tight labour markets and easing inflation-investors are cautious that trade tensions will resurface, reviving fears of supply chain disruptions and stagflation.

Early in the month, the South African equities suffered their sharpest one-day decline in three years as aggressive U.S. tariffs clouded earnings outlooks and economic prospects. The FTSE/JSE Africa All Share Index dropped 3.4% in early April, marking its worst fall since April 2022. The selloff was triggered by U.S. President Donald Trump's unexpected move to impose a 31% tariff on South African imports, part of a broader trade policy shift that rattled global markets. With the U.S. being South Africa's second-largest export destination - accounting for about 11% of exports - sentiment quickly turned negative. The rand sank to a record low of 19.9325 against the U.S. dollar in mid-April, before recovering to 18.5132 by month-end following Trump's announcement of a temporary 90-day suspension on some tariffs.

On the fiscal front, the South African government abandoned a controversial plan to raise value-added tax (VAT) after encountering strong political resistance that threatened coalition unity. Originally intended to increase VAT by one percentage point over two years, the proposal was shelved amid sluggish economic growth and widespread discontent over rising living costs. The VAT rate remains at 15%.

Meanwhile, South Africa's trade surplus grew to ZAR 24.8 billion in March - the largest in four months - up from a downwardly revised ZAR 20 billion in February. Exports increased by 5.7% to ZAR 172.48 billion, while imports also rose, albeit at a slower 3.2%, to ZAR 147.71 billion. South Africa's consumer price index (CPI) delivered a positive surprise in March, falling to 2.7% - the lowest since June 2020 and well below the Reserve Bank's 3-6% target range. The decline from February's 3.2% inflation prints boosts expectations for possible rate cuts, despite heightened market volatility. Analysts had anticipated a steadier reading around 3.1%.

Looking ahead, the announcement of aggressive Trump-era tariffs has added complexity to the U.S. interest rate outlook, as markets now balance the inflationary effect of rising import costs against slowing economic growth. While the Fed had been signaling possible rate cuts amid easing core inflation, renewed trade tensions may stall disinflation and prompt greater caution. Higher prices and softer global trade could dampen investment and consumption, increasing the risk of a growth slowdown. As such, current market expectations for 3 to 4 rate cuts in 2025 may prove optimistic. We anticipate a slower pace, with likely only 2 cuts in both the U.S. and South Africa over the remainder of the year.

In the month of April, the ALBI TR ZAR Index delivered 0.76% m/m, while the CILI TR ZAR Index delivered -0.19% m/m.

GLOSSARY

Net Asset Value (NAV): Means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.

Highest & Lowest Return: The highest and lowest rolling twelve-month performance of the portfolio since inception.

Total Expense Ratio (TER): Reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's

Transaction Costs (TC): Is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns.

FUND RISK

Derivative Risk: Derivative positions are financial instruments that derive their value from an underlying asset. Derivatives are exposed to implicit leverage which could result in magnified gains and/or losses on the portfolio.

Volatility Risk: Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at risk (VaR) which is a statistical technique used to measure and quantify the level of volatility.

Equity Risk: Applies to investment in shares or derivatives based on shares. The market price of shares varies depending on supply and demand of the shares. Equity risk is the risk of loss due to the drop in the market price of shares. Equity risk can either be systematic risk which is risk to the entire market based on political and economic indicators or unsystematic risk which is company specific and includes risk relating to company profits, future prospects and general consensus on the company or sector.

INVESTMENT COMPANY

Taquanta Asset Managers(Pty) Ltd

Registration Number: 1999/021871/07

5th Floor Draper on Main, 47 Main Road, Claremont, Western Cape, 7708

Telephone: +27 21 681 5100

Email: info@taquanta.com

Website: www.taquanta.co.za

Annualised Return: Is the weighted average compound growth rate over the performance period measured.

Total Investment Charge (TIC): Should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager.

Total Investment Charges (TIC%): = TER (%) + TC (%): The Total Investment Charges (TIC), the TER + the TC, is the percentage of the net asset value of the class of the Financial Product incurred as costs relating to the investment of the Financial Product. It should be noted that a TIC is the sum of two calculated ratios (TER+TC).

Derivative / Financial Instrument: A contract that derives its value (positive or negative) from another asset

Concentration and Sector Risk: A large proportion of total assets invested in specific assets, sectors or regions. Concentrated positions or concentrated sectors in a portfolio will material impact the returns of the portfolio more so than diversified portfolios

Interest Rate Risk: The values of bonds and other debt securities are inversely proportional to the change in interest rates. Interest rate risk is generally greater for investments with longer maturities as well as when the market does not expect a change in the interest rates

Credit Default Risk: The risk that the government entity or company that issued the bond will run into financial difficulties and won't be able to pay the interest or repay the principal at maturity. Credit risk applies to debt investments such as bonds. The higher credit rating the less likely the possibility of the issuing company defaulting.

Currency/Exchange Rate Risk: Assets of a fund may be denominated in a currency other than the Base Currency of the fund and changes in the exchange rate between the Base Currency and the currency of the asset may lead to a depreciation of the value of the fund's assets as expressed in the Base Currency.

MANDATORY DISCLOSURE:

Collective Investment Schemes are generally medium to long-term investments. The value of participatory interests (units) may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investments are traded at ruling prices and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges, minimum fees, and maximum commissions, as well as detailed description of how performance fees are calculated and applied, is available on request from FundRock Management Company (RF) (Pty) Ltd ("the Manager"). The Manager does not provide any guarantee in respect to the capital or the return of the portfolio. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressure and in such circumstances, a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Commissions and incentives may be paid, and if so, are included in the overall costs. The Manager may close the portfolio to new investors in order to manage it efficiently according to its mandate. Prices are published daily on the Manager's website. Additional information, including Key Investor Information Document ("KIID"), Minimum Disclosure Document ("MDD"), as well as other information relating to the basis on which the Manager undertakes to repurchase participatory interests offered to it, and the basis on which selling and repurchase prices will be calculated, is available, free of charge, on request from the Manager. The value of an investment is dependent on numerous factors which may include, but not limited to, share price fluctuations, interest and exchange rates and other economic factors. The Manager ensures fair treatment of investors by not offering preferential fee or liquidity terms to any investor within the same strategy. The Manager is registered and approved by the Financial Sector Conduct Authority ("the Authority") under the Collective Investment Schemes Control Act No. 45 of 2002 ("CISCA"). The Manager retains full legal responsibility for the portfolio.

The Financial Services Provider ("FSP"), Taquanta Asset Managers (Pty) Ltd, FSP No. 618, is authorised under the Financial Advisory and Intermediary Services Act 37 of 2002 to render investment management services. The annualized total return is the average return earned by an investment each year over a given time period, since the launch date of the portfolio. Actual annual figures are available from the Manager on request. The highest and lowest one (1) year returns represent the highest and lowest actual returns achieved during a 12-month rolling period year since the first launch date of the portfolio. The performance figures are the yields on a Net Asset Value ("NAV") basis. The yield figure is not a forecast. Performance is not guaranteed, and investors should not accept it as representing expected future performance. Individual investor performance may differ as a result of initial fees, time of entry/actual investment date, date of reinvestment, and dividends withholding tax. Performance is calculated for a lump sum investment on a NAV. The performance figures are reported net of fees with income reinvested. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the financial product and impacts financial product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees.
